

"Twinkle Twinkle" Space Song
Copp

We live in the Milky Way
The other side's so far away
A couple hundred billion stars
the outer arm is where we are
a hundred thousand light years big
spinning like a dancing jig

Glowing gas, burning ball
Even though you looks so small
Bigger than the Earth you are
A trillion miles away so far
When the blazing sun is gone
stars will shine until the dawn

planets circle round the sun
we'll name every single one
Jupiter, Earth and Mars
Venus is the morning star
Neptune, Saturn, Mercury
Uranus a blueberry

Out beyond the planet Mars
that is where the asteroids are
chunks of rock and metal fly
like a meatball in the sky
when they get too close to us
shooting stars burn into dust
