

**For Where Does Light Come From?**

Light is all around us.

# But where does light come from?

Light sources can be **artificial** (made by humans) or **natural** (happens without humans).

Artificial sources of light include:  
**flashlights,**

streetlights,

and lightbulbs.

Natural sources of light include: the  
**sun,**

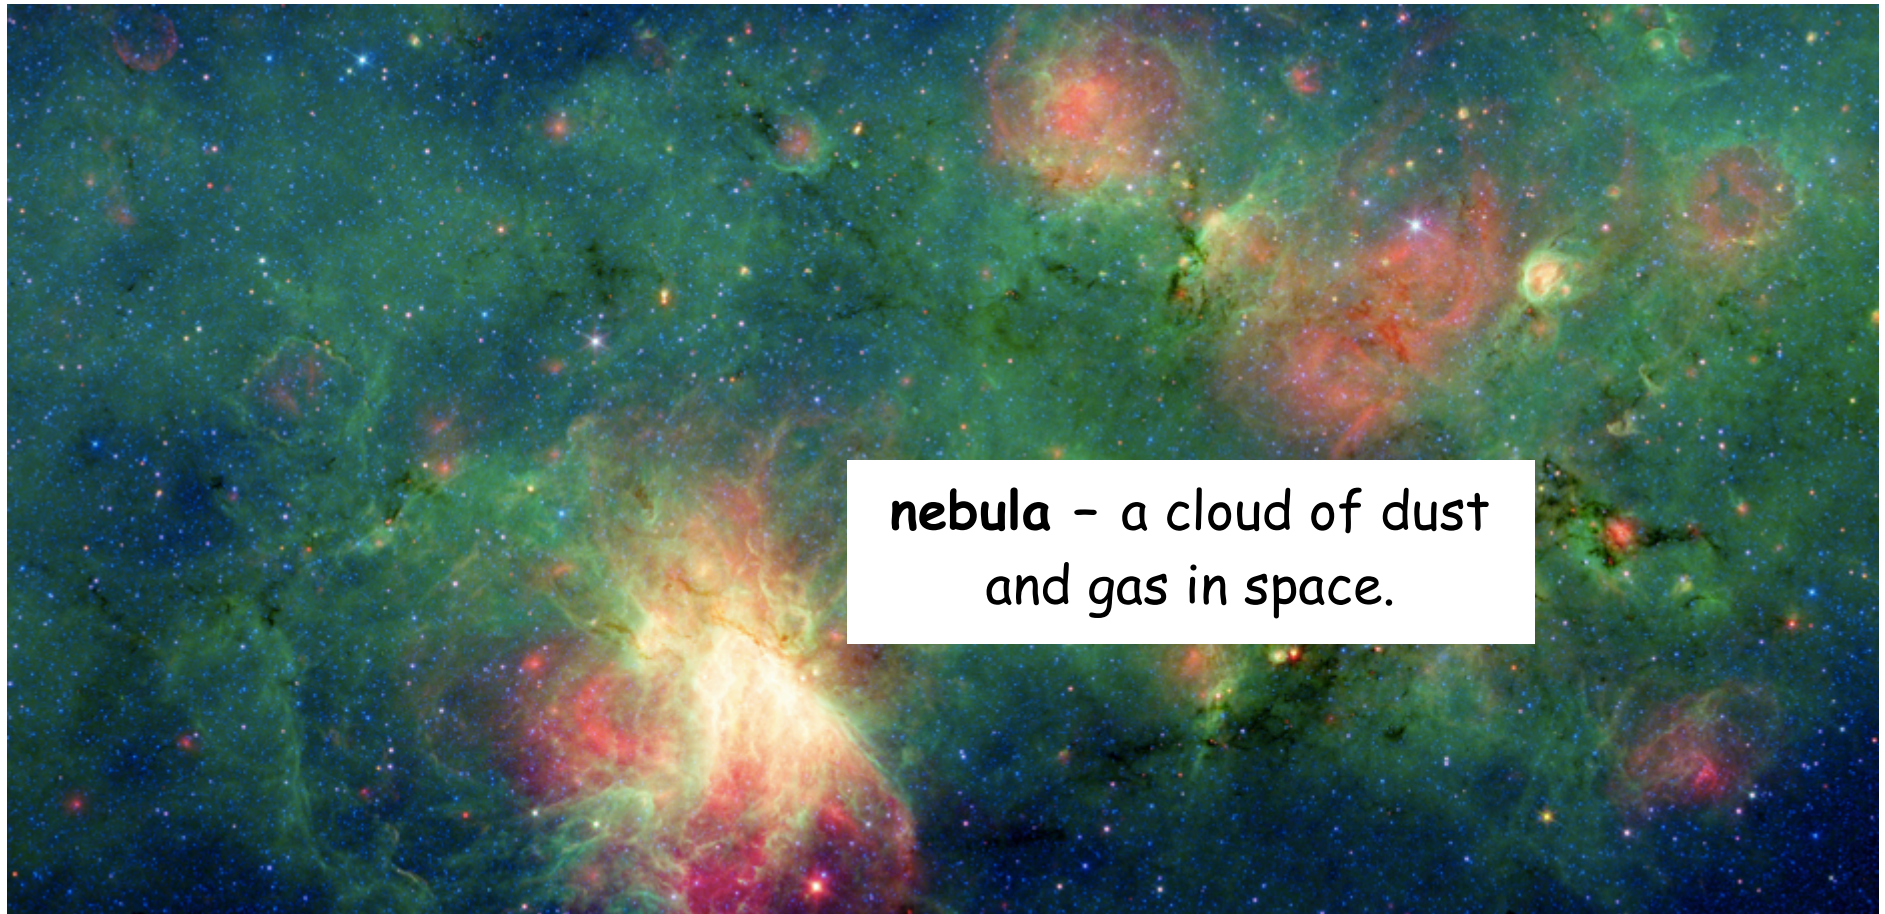

**lightning,**

the moon,

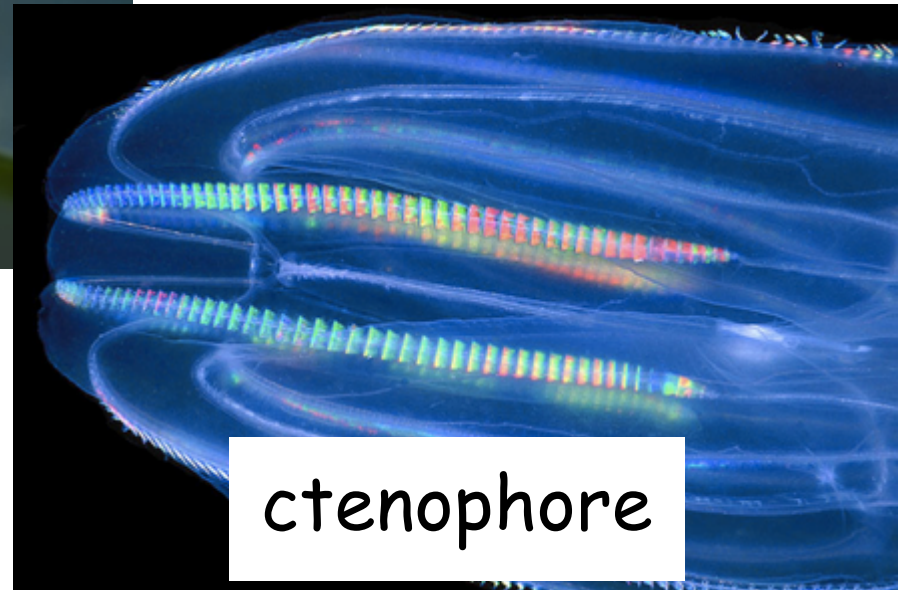

**nebula** - a cloud of dust  
and gas in space.

**nebulae and stars,**

firefly

**bioluminescence** –  
when a living thing  
makes and glows out  
light.

ctenophore

and even living things.
