Homework Key

\$14440)\\<mark>8.1</mark>

In Exercises 1 to 4, determine the point estimator you would use and calculate the value of the point estimate.

1. Got shoes? How many pairs of shoes, on average, do
.. female teens have? To find out, an AP Statistics class
conducted a survey. They selected an SRS of 20
temale students from their school. Then they
recorded the number of pairs of shoes that each
student reported having. Here are the data:

50	26	26	31	57	19	24	22	23	38
13	50	13	34	23	30	49	13	15	5 L

Got shoes? The class in Exercise 1 wants to estimate the variability in the number of pairs of shoes that female students have by estimating the population variance σ^2 .

TODO

Note: Use the sample SD Sx=14.24

X = 30.35

15 Shoes The AP Statistics class in Exercise I also asked an SRS of 20 boys at their school how many shoes they have. A 95% confidence interval for the difference in the population means (girls - boys) is 10.9 to 26.5. Interpret the confidence interval and the confidence level.

CL: IF THIS SAMPLING METHOD EMPLOYED MANY TIMES, APPROX, 95% of the resulting confidence interval would capture the tryed ofference and point shoes between boy

Multiple choice: Select the best answer for Exercises 21 to 24.

A researcher plans to use a random sample of n =500 families to estimate the mean monthly family income for a large population. A 99% confidence interval based on the sample would be _____ than a 90% confidence interval.

- (a) narrower and would involve a larger risk of being 99% Wider
- (b) wider and would involve a smaller risk of being incorrect 91%
- (c) narrower and would involve a smaller risk of being incorrect
- (d) wider and would involve a larger risk of being incorrect
- (e) wider, but it cannot be determined whether the risk of being incorrect would be larger or smaller

In a poll, * * IM ADRTANT PONT ON MEX

- 1. Some people refused to answer questions.
- II. People without telephones could not be in the sample.
- III. Some people never answered the phone in several calls.

Which of these sources is included in the $\pm 2\%$ margin of error announced for the poll?

- (a) I only
- (c) III only
- (e) None of these
- (b) [I only (d) I, II, and [II

CI: Weare 95% confident that the interval from 10.9 + 026.5 captures the true difference in the water average of pairs of shoes owned by girls boys (girls - boys

You have measured the systolic blood pressure of an SRS of 25 company employees. A 95% confidence

> interval for the mean systolic blood pressure for the employees of this company is (122, 138). Which of the following statements gives a valid interpretation of this interval?

- (a) 95% of the sample of employees have a systolic blood pressure between 122 and 138.
- (b) 95% of the population of employees have a systolic blood pressure between 122 and 138.
- (\mathfrak{c}) If the procedure were repeated many times, 95% of the resulting confidence intervals would contain the population mean systolic blood pressure.
- (d) The probability that the population mean blood pressure is between 122 and 138 is 0.95.
- (e) If the procedure were repeated many times, 95% of the sample means would be between 122 and 138.

A polling organization announces that the proportion of American voters who favor congressional term limits is 64%, with a 95% confidence margin of error of 3%. If the opinion poll had announced the margin of error for 80% confidence rather than 95% m = = confidence, this margin of error would be Critical value

- (a) 3%, because the same sample is used. SD (statistic)
- (b) less than 3%, because we require less confidence.
- (c) less than 3%, because the sample size is smaller.
- (d) greater than 3%, because we require less confidence.
- (e) greater than 3%, because the sample size is smaller.

mE accounts ucricle lity due to rendom selection assignment ME does NOT compensite for any bias in the data collection process

Exercises

For Exercises 27 to 30, check whether each of the conditions is met for calculating a confidence interval for the population proportion p.

- Rating dorm food Latoya wants to estimate what proportion of the seniors at her high school like the cafeteria food. She interviews an SRS of 50 of the 175 seniors living in the dormitory. She finds that 14 think the cafeteria food is good.
- 28. High tuition costs Glenn wonders what proportion of the students at his school think that tuition is too high. He interviews an SRS of 50 of the 2400 students at his college. Thirty-eight of those interviewed think tuition is too high.phat=38/50=.76
- 29. AIDS and risk factors In the National AIDS Behavioral Surveys sample of 2673 adult heterosexuals, 0.2% had both received a blood transfusion and had a sexual partner from a group at high risk of AIDS. We want to estimate the proportion p in the population who share these two risk factors.
- 30 Whelks and mussels The small round holes you often see in sea shells were drilled by other sea creatures, who ate the former dwellers of the shells. Whelks often drill into mussels, but this behavior appears to be more or less common in different locations. Researchers collected whelk eggs from the coast of Oregon, raised the whelks in the laboratory, then put each whelk in a container with some delicious mussels. Only 9 of 98 whelks drilled into a mussel.11 The researchers want to estimate the proportion p of Oregon whelks that will spontaneously drill into mussels.

IN DEPENDENT: NOT MET BECAUSE sample does not meet the log contition. N=175 n=50 *10 = 500 minimum population (M) Conditions met Rendom: SRS Independent: 50 x 10 = 500 < 2400 1025 conditions

NO. THEY SHOULD NOT CALCULATE A MARGIN OF ERROR, BECAUSE THE RAN DOM Condition was NOT met

response semple, so no inference should Population

School vouchers A national opinion poll found that 44% of all American adults agree that parents should -be-given vouchers that are good for education at any public or private school of their choice. The result was based on a small sample.

- (a) How large an SRS is required to obtain a margin of error of 0.03 (that is, ±3%) in a 99% confidence interval? Answer this question using the previous poll's result as the guessed value for \hat{p} .
- (b) Answer the question in part (a) again, but this time use the conservative guess $\hat{p} = 0.5$. By how much do the two sample sizes differ?

The difference in Semple Size 15 26

Multiple choice: Select the best answer for Exercises 49 to 52.

49.) A Callup Poll found that only 28% of American adults expect to inherit money or valuable possessions from a relative. The poll's margin of error was ±3 percentage points at a 95% confidence level. This means that

(a) the poll used a method that gets an answer within 3% of the truth about the population 95% of the time.

- (b) the percent of all adults who expect an inheritance is between 25% and 31%.
- (c) if Gallup takes another poll on this issue, the results of the second poll will lie between 25% and 31%.
- (d) there's a 95% chance that the percent of all adults who expect an inheritance is between 25% and 31%.
- (e) Gallup can be 95% confident that between 25% and 31% of the sample expect an inheritance.

🦊 of students at your school who agree with the $\sum \overline{k}$ statement, "The student government is an effective vi organization for expressing the needs of students to the administration." You will use a 95% confidence interval, and you would like the margin of error to be 0.05 or less. The minimum sample size required is (a) 22. (b) 271. (c) 385. (d) 769. (e) 1795. 52. I collect an SRS of size n from a population and compute a 95% confidence interval for the population proportion. Which of the following would produce a new confidence interval with larger width (larger margin of error) based on these same data? (a) Use a larger confidence level. ME = 2

You want to design a study to estimate the proportion

(b) Use a smaller confidence-level.

(c) Increase the sample size.

(d) Use the same confidence level, but compute the interval n times. Approximately 5% of these intervals

will be larger.

(e) Nothing can guarantee absolutely that you will get a larger interval. One can only say that the chance of obtaining a larger interval is 0.05.

(50) Most people can roll their tongues, but many can't. The ability to roll the tongue is genetically determined. Suppose we are interested in determining what proportion of students can roll their tongues. We test a simple random sample of 400 students and find that 317 can roll their tongues. The margin of error for \$ = 79 a 95% confidence interval for the true proportion of tongue rollers among students is closest to

(a) 0.008. (c) 0.03. (e) 0.208. (b) 0.02. (d) 0.04. mE = 1.96

ME= 16399

Marion 8.3

Exercises

Find sample size when population SD Known

The SAT again High school students who take the SAT Math exam a second time generally score higher than on their first try. Past data suggest that the score increase has a standard deviation of about 50 points. How large a sample of high school students would be needed to estimate the mean change in SAT score to within 2 points with 95% confidence? Show-your work.

MINIMUM SEMPLE SIZE OF 2,401

6=50 $Z^* = \frac{6}{\ln 2} = \frac{2}{\ln 2} = \frac{1.96}{\ln 2} = \frac{2.90}{\ln 2} = \frac{1.96}{\ln 2} = \frac{2.90}{\ln 2} = \frac{1.96}{\ln 2}$

Critical values What critical value t* from Table B would you use for a confidence interval for the population mean in each of the following situations?

(a)95% n=10 df=10-1=9 T*= 1 mrv T (0025, 9) = (2,26=t*)

(a) A 95% confidence interval based on n = 10 observations.

(b) A 99% confidence interval from an SRS of 20 (b) observations.

6) 99% n=20 df=20-1=19 1005 199 1005

t*= InvT (, cos, 19)

60. Travel time to work A study of commuting times reports the travel times to work of a random sample of 20 employed adults in New York State. The mean is $\bar{x} = 31.25$ minutes, and the standard deviation is $s_x = 21.88$ minutes. What is the standard error of the mean? Interpret this value in context.

X = 31.25 $5_x = 21.88$ h = 20 $SE(\bar{x}) = \frac{Sx}{\sqrt{n}} = \frac{21.88}{\sqrt{z_0}} = 4.8925$

Rendom: SRSV Independent: 20 × 10 = 200 NY employees V Normal - must assume IN REPEATED SAMPLING THE AUERAGE
DISTANCE BETWEEN THE SAMPLE
MEANS AND THE POPOLATION
MEAN WILL BE ABOUT
4.89 MINUTES.

Give it some gas! Computers in some vehicles calculate various quantities related to performance. One of these is fuel efficiency, or gas mileage, usually expressed as miles per gallon (mpg). For one vehicle equipped in this way, the miles per gallon were recorded each time the gas tank was filled and the computer was then reset. Here are the mpg values for a random sample of 20 of these records:

LEVEL OF CONFIDENCE.

67. Bone loss by nursing mothers Breast-feeding mothers secrete calcium into their milk. Some of the calcium may come from their bones, so mothers may lose bone mineral. Researchers measured the percent change in bone mineral content (BMC) of the spines of 47 randomly selected mothers during three months of breast-feeding.26 The mean change in BMC was -3.587% and the standard deviation was 2.506%.

WILL HAVE A SLICHTLY

CHECK CONDITIONS * We do not know the population mean or standard deviction so we check conditions for "timtered of le" (1) (Random - Random 5 emple

(a) Construct and interpret a 99% confidence interval to estimate the mean percent change in BMC in the population.

(2) Independent - We have date from less than 10% of nursing mothers (3) Normal - n7,30

(b) Based on your interval from (a), do these data give good evidence that on the average nursing mothers lose bone mineral? Explain.

CONDITIONS MET

(A) $\bar{X} = -3.58770$ $90(\bar{x}) = 2.506\%$ n = 47 df = 46 99% $cI \rightarrow \pm^* = 2.69$ invT (.005, 46) $\overline{X} \pm t^* \frac{5x}{5n} \rightarrow -3.587 \pm 2.69 \left(\frac{2.506}{\sqrt{97}}\right)$

WEARE 99% Confident -3,587 + 983

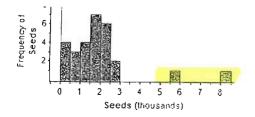

(-4.57, -2.604) that the interval from

-4,57 to -2,60 captures the true mean percent change in BMC.

BYES. THE INTERUAL INCLUDES ONLY NEGATIVE NUMBERS, WHICH REPRESENTS BONE MINGRAL LUSS, SO WE ARE QUITE CONFIDENT THAT NURSING MOTHERS LOSE BONE MINERAL

Weeds among the corn Velvetleaf is a particularly annoying weed in cornfields. It produces lots of seeds, and the seeds wait in the soil for years until conditions are right for sprouting. How many seeds do velvetleaf plants produce? The Fathom histogram below shows the counts from 28 plants that came up in a cornfield when no herbicide was used. 30 Explain why it would not be wise to use a one-sample t interval to estimate the mean number of seeds μ produced by velvetleaf plants.

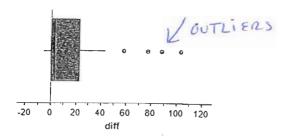

THE SAMPLE SIZE IS SMALL (n=28) AND THERE ARE SEVERAL CUTLIERS SO IT WOULD NOT BE APPROBRIATE TO USE A ONE-SAMPLE t interval to estimate a confidence interval.

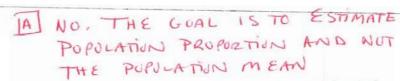

Should we use t? In each of the following situations, discuss whether it would be appropriate to construct

a one-sample t interval to estimate the population mean.

- (a) We collect data from a random sample of adult residents in a state. Our goal is to estimate the overall percent of adults in the state who are college graduates.
- (b) The coach of a college men's basketball team records the resting heart rates of the 15 team members. We use these data to construct a confidence interval for the mean resting heart rate of all male students at this college.
- (c) Do teens text more than they call? To find out, an AP Statistics class at a large high school collected data on the number of text messages and calls sent or received by each of 25 randomly selected students. The Fathom boxplot below displays the difference (texts calls) for each student.

No. The sample was not an SRS of ALL males at the college. It only included members of the team.

Semple (n = 25) AND THE GRAPH SHOWS SEVERAL OUTLIERS.

ME = 2 + 6

to 78.

One reason for using a t distribution instead of the standard Normal curve to find critical values when calculating a level C confidence interval for a

Multiple choice: Select the best answer for Exercises 75

population mean is that

(a) z can be used only for large samples.

(b) z requires that you know the population standard deviation σ .

- (c) z requires that you can regard your data as an SRS from the population.
- (d) the standard Normal table doesn't include confidence levels at the bottom.
- (e) a z critical value will lead to a wider interval than a t critical value.

You have an SRS of 23 observations from a Normally distributed population. What critical value would you use to obtain a 98% confidence interval for the mean μ of the population if σ is unknown?

(a) 2.508 (c) 2.326 (e) 2.177

(b) 2.500 (d) 2.183 $t^* = inv T(.01, 22)$ A quality control inspector will measure the salt content (in milligrams) in a random sample of bags of potato chips from an hour of production. Which of

the following would result in the smallest margin of error in estimating the mean salt content μ ?

(a) 90% confidence; n = 25 $+^* = 1.71$ (b) 90% confidence; n = 50 $+^* = 1.65$

(c) 95% confidence; n = 25 Z^{*} = 2.06

(d) 95% confidence; n = 50 $z^* = 1.96$

(e) n = 100 at any confidence level

Scientists collect data on the blood cholesterol levels (milligrams per deciliter of blood) of a random sample of 21 laboratory rats. A 95% confidence interval for the mean blood cholesterol level μ is 80.2 to 89.8. Which of the following would cause the most worry about the validity of this interval?

(a) There is a clear outlier in the data.

Smell Semple so Use t-stastic

(b) A stemplot of the data shows a mild right-skew.

(c) You do not know the population standard deviation σ .

- (d) The population distribution is not exactly OK Normal.
- (e) None of these would be a problem because the t procedures are robust.
