

**7.6 Solve Linear Systems of Linear Inequalities**

Goal • Solve systems of linear inequalities in two variables.

**VOCABULARY:**

<u>Example:</u>	<u>System of linear inequalities</u>
<u>GRAPH</u> $x < 5$ $T(0,0) \quad 0 < 5 \text{ T}$	Consists of 2 LINEAR INEQUALITIES WITH 2 VARIABLES.
<u>GRAPH</u> $y \leq 5$ $T(0,0) \quad 0 \leq 5 \text{ T}$	<u>EXAMPLE :</u> $x < 5$ - DASHED - VLINE - $m = \text{UNDEFINED}$ $y \leq 5$ - SOLID - HLINE - $m = 0$
	<u>Solution of a system of linear inequalities</u> <u>SOLUTION REGION</u> : are all the points in the region where their graphs intersect

**GRAPHING A SYSTEM OF LINEAR INEQUALITIES**Step 1 Graph the 1<sup>ST</sup> inequality.Step 2 Graph the 2<sup>ND</sup> inequality.Step 3 Find the INTERSECTION of the graphs.Step 4 The "SOLUTION Region" is where the graphs INTERSECT.Use an ARROW to IDENTIFY the solution region.

## Algebra 1 Notes...

**Example 1** Graph the system of inequalities.

$$\text{Inequality 1: } x+3y > 6$$

$$\text{Inequality 2: } 2x - 3y \geq 3$$

**Step 1** Graph the 1<sup>st</sup> inequality.

$$x+3y > 6 \quad (\text{use intercepts})$$

$$x: 6 \quad y: 2 \quad \text{DOTTED LINE}$$

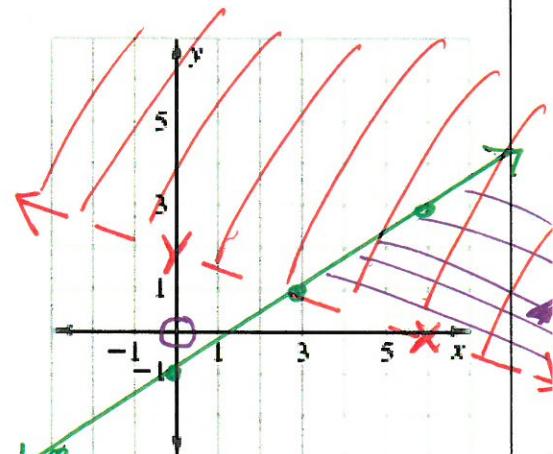

$$T(0,0) \quad 0 > 6 \text{ F}$$

**Step 2** Graph the 2<sup>nd</sup> inequality.

$$\begin{aligned} 2x - 3y &\geq 3 & (\text{PUT IN } y = mx + b) \\ -2x &-2x \\ -3y &> -2x + 3 \\ -\frac{1}{3}y &> -\frac{2}{3}x + 1 \\ y &\leq \frac{2}{3}x - 1 \end{aligned} \quad \text{Solid Line}$$

$$\boxed{y \leq \frac{2}{3}x - 1} \quad m = \frac{2}{3}, b = -1$$

\*remember: when you mult or divide the variable by a negative number reverse the inequality!

**Step 3** Find the intersection of the graphs.

$$T(0,0) \quad 0 > 3 \text{ F} \quad \text{or} \quad 0 \leq -1 \text{ F}$$

**Step 4** Mark the Solution Region with an arrow.

**Check Point – Graph the system of linear inequalities.**

2) both Dotted Line

$$y > -2x - 3$$

$$m = -2, b = -3$$

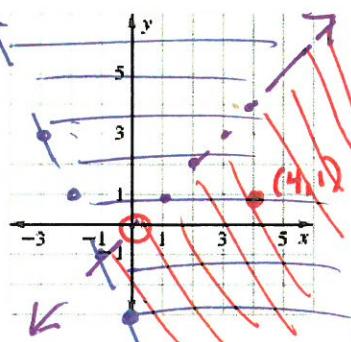

$$T(0,0) \quad 0 > -3 \text{ T}$$

$$y < x \quad \text{TRICKY!}$$

$$m = 1, b = 0$$

Pick a point to test (4,1)

$$1 < 4 \text{ T}$$

3)

BOTH SOLID LINES

$$x + y \leq 4$$

$$x: 4 \\ y: 4$$

$$T(0,0) \quad 0 \leq 4 \text{ T}$$

$$-y \leq -x + 6$$

$$\cancel{x} = \cancel{-x}$$

$$y \geq x - 6$$

$$T(0,0) \quad 0 \leq 6 \text{ T} \quad \text{or} \quad 0 \geq -6 \text{ T}$$
