LESSON 53 Practice
 For use with pages 302-308

Write an equation in point-slope form of the line that passes through the given point and has the given slope m . Give both P/S + S/I

1. $(1, 9); m = -3$

P/S: $y - 9 = -3(x - 1)$
 $y - 9 = -3x + 3$
 $+9 \quad +9$

 S/I: $y = -3x + 12$

2. $(4, -10); m = 2$

P/S: $y + 10 = 2(x - 4)$
 $y + 10 = 2x - 8$
 $+10 \quad -10$

 S/I: $y = 2x - 18$

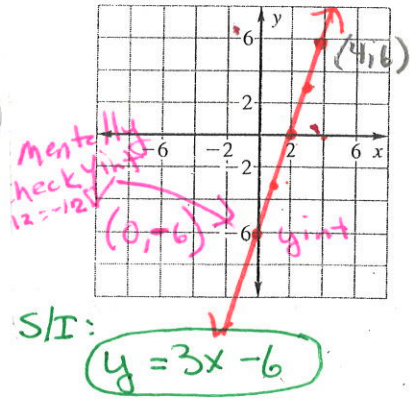

3. $(-5, 6); m = 4$

P/S: $y - 6 = 4(x + 5)$
 $y - 6 = 4x + 20$
 $+6 \quad +6$

 S/I: $y = 4x + 26$

Graph the equation. then give S/I EQ

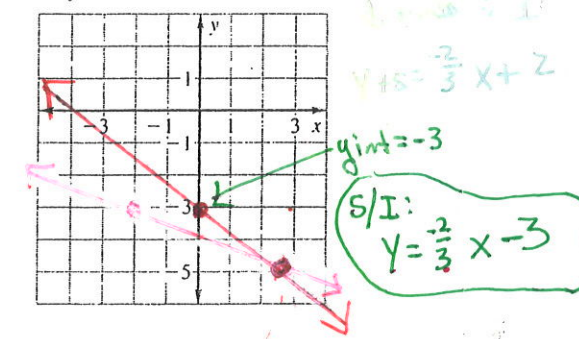

10. $y - 6 = 3(x - 4)$ $m = 3$ $PT (4, 6)$

11. $y + 2 = 4(x - 2)$ $m = 4$ $PT (2, -2)$

12. $y + 5 = -\frac{2}{3}(x - 3)$ $m = -\frac{2}{3}$ $PT (3, -5)$

Write an equation of the line that passes through the given points. Find both P/S AND S/I.

113. $(-10, 7), (5, -3)$

$M = \frac{\Delta y}{\Delta x} = \frac{7 - (-3)}{-10 - 5} = \frac{10}{-15} \rightarrow M = -\frac{2}{3}$
 $M = \frac{-3 - 7}{5 - (-10)} = \frac{-10}{15} = -\frac{2}{3}$

P/S: pick $p + 1$:
 $y - 7 = -\frac{2}{3}(x + 10)$
 $y - 7 = -\frac{2}{3}x - \frac{20}{3}$
 $+7 \quad +7$

 S/I: $y = -\frac{2}{3}x + \frac{11}{3}$

OTHER P/S: $y + 3 = -\frac{2}{3}(x - 5)$

114. $(-8, 84), (5, -46)$

$M = \frac{\Delta y}{\Delta x} = \frac{84 - (-46)}{-8 - 5} = \frac{130}{-13} = -10$

P/S: $y - 84 = -10(x + 8)$
 $y - 84 = -10x - 80$
 $+84 \quad +84$

 S/I: $y = -10x + 4$

OTHER P/S: $y + 46 = -10(x - 5)$

115] Write the EQUATION OF A HORIZONTAL LINE THROUGH THE POINT $(9, 81)$

$y = 81$

116] Write the EQUATION OF A VERTICAL LINE THROUGH $(9, 81)$.

$x = 9$

Write an equation of the line shown. Use the right-hand point to write the equation. IN S/I.

$m = \frac{6}{3} = 2$

* P/S $y - 3 = 2(x + 2)$
 $y - 3 = 2x + 4$
 $+3 \quad +3$
 $y = 2x + 7$

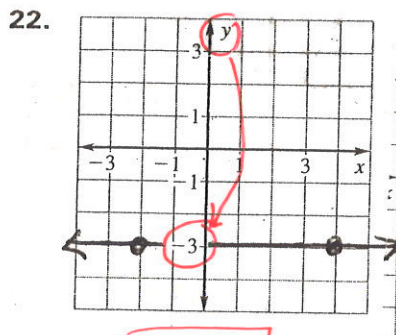

$m = \frac{\text{Rise}}{\text{Run}} = \frac{6}{4} \quad m = \frac{3}{2}$

$y = \frac{3}{2}x + 3$

$m = \frac{6}{-2} \quad m = -3$

$y = -3x - 5$

$y = -3$

$x = 5$
