

Science: Human Anatomy
Unit 6: Circulatory System

<p>Essential Understandings</p>	<ul style="list-style-type: none"> ▪ Blood carries all the necessary nutrients and gases for the human body. ▪ The structure of the heart allows for blood to be pumped to all parts of the body. ▪ There are three types of blood vessels. ▪ The heart is the central organ of the Circulatory System
<p>Essential Questions</p>	<ul style="list-style-type: none"> ▪ What allows blood to carry Oxygen and other nutrients? ▪ How does blood circulate around the body? ▪ How does the heart work in conjunction with the lungs? ▪ What is blood pressure?
<p>Essential Knowledge</p>	<ul style="list-style-type: none"> ▪ Hemoglobin allows red blood cells to carry oxygen. ▪ Blood cells come from bone marrow. ▪ The shape of a red blood cell is important for blood flow and the carrying of nutrients. ▪ There are three types of plasma proteins: albumins, globulins, and fibrinogens. ▪ Platelets aid in blood clotting and wound healing. ▪ Blockage of a blood vessel can lead to serious complications. ▪ The valves of the heart allow blood to flow directionally through sections of the heart. ▪ The major blood vessels of the body are arteries, veins, and capillaries. ▪ Blood pressure refers to the stress of the blood pushing outwards on vessels as it flows through the body. ▪ Electrical impulses trigger cardiac rhythms.
<p>Vocabulary</p>	<ul style="list-style-type: none"> ▪ <u>Terms:</u> <ul style="list-style-type: none"> ○ Hemoglobin, Leucocyte, Plasma, Platelet, Arteriole, Artery, Atrium, Capillary, Endocardium, Epicardium, Myocardium, Pericardium, Vein, Ventricle, Diastole, Systole, Stroke, Cardiac Arrest, Albumin, Globulin, Fibrinogen, Coagulation, Fibrin, Septum, Tricuspid Valve, Pulmonary Valve, Aorta, Vena Cava, Aortic Valve, ECG
<p>Essential Skills</p>	<ul style="list-style-type: none"> ▪ Label all the parts of a human heart and track blood flow. ▪ Discuss the flow of blood through the body and the body's mechanisms for ensuring all organs get appropriate nutrients. ▪ Recognize the connection between the heart and lungs. ▪ Describe how a wound heals. ▪ Read a person's blood pressure. ▪ Describe some of the proteins found in blood.

Science

A. Unifying Themes

A1. Systems

Students apply an understanding of systems to explain and analyze man-made and natural phenomena.

- a. Analyze a system using the principles of boundaries, subsystems, inputs, outputs, feedback, or the system's relation to other systems and design solutions to a system problem.
- b. Explain and provide examples that illustrate how it may not always be possible to predict the impact of changing some part of a man-made or natural system.

A3. Constancy and Change

Students identify and analyze examples of constancy and change that result from varying types and rates of change in physical, biological, and technological systems with and without counterbalances.

B. The Skills and Traits of Scientific Inquiry and Technological Design

B1. Skills and Traits of Scientific Inquiry

Students methodically plan, conduct, analyze data from, and communicate results of in-depth scientific investigations, including experiments guided by a testable hypothesis.

- a. Identify questions, concepts, and testable hypotheses that guide scientific investigations.
- b. Design and safely conduct methodical scientific investigations, including experiments with controls.
- c. Use statistics to summarize, describe, analyze, and interpret results.
- d. Formulate and revise scientific investigations and models using logic and evidence.
- e. Use a variety of tools and technologies to improve investigations and communications.
- f. Recognize and analyze alternative explanations and models using scientific criteria.
- g. Communicate and defend scientific ideas.

B2. Skills and Traits of Technological Design

Students use a systematic process, tools and techniques, and a variety of materials to design and produce a solution or product that meets new needs or improves existing designs.

- a. Identify new problems or a current design in need of improvement.
- b. Generate alternative design solutions.
- c. Select the design that best meets established criteria.
- d. Use models and simulations as prototypes in the design planning process.
- e. Implement the proposed design solution.

Unit 6: Circulatory System

	<ul style="list-style-type: none">f. Evaluate the solution to a design problem and the consequences of that solution.g. Present the problem, design process, and solution to a design problem including models, diagrams, and demonstrations. <p>C. The Scientific and Technological Enterprise</p> <p>C1. Understandings of Inquiry</p> <p>Students describe key aspects of scientific investigations: that they are guided by scientific principles and knowledge, that they are performed to test ideas, and that they are communicated and defended publicly.</p> <ul style="list-style-type: none">a. Describe how hypotheses and past and present knowledge guide and influence scientific investigations.b. Describe how scientists defend their evidence and explanations using logical argument and verifiable results.

C2.Understandings About Science and Technology

Students explain how the relationship between scientific inquiry and technological design influences the advancement of ideas, products, and systems.

- a. Provide an example that shows how science advances with the introduction of new technologies and how solving technological problems often impacts new scientific knowledge.
- b. Provide examples of how creativity, imagination, and a good knowledge base are required to advance scientific ideas and technological design.

C3.Science, Technology, and Society

Students describe the role of science and technology in creating and solving contemporary issues and challenges.

- b. Explain how ethical, societal, political, economic, and cultural factors influence personal health, safety, and the quality of the environment.
- c. Explain how ethical, societal, political, economic, religious, and cultural factors influence the development and use of science and technology.

C4.History and Nature of Science

Students describe the human dimensions and traditions of science, the nature of scientific knowledge, and historical episodes in science that impacted science and society.

- a. Describe the ethical traditions in science including peer review, truthful reporting, and making results public.
- b. Select and describe one of the major episodes in the history of science including how the scientific knowledge changed over time and any important effects on science and society.
- c. Give examples that show how societal, cultural, and personal beliefs and ways of viewing the world can bias scientists.
- d. Provide examples of criteria that distinguish scientific explanations from pseudoscientific ones.

D. The Physical Setting

D2.Earth

Students describe and analyze the biological, physical, energy, and human influences that shape and alter Earth Systems.

- c. Describe and analyze the effects of biological and geophysical influences on the origin and changing nature of Earth Systems.
- d. Describe and analyze the effects of human influences on Earth Systems.

D3.Matter and Energy

Students describe the structure, behavior, and interactions of matter at the atomic level and the relationship between matter

Science: Human Anatomy
Unit 6: Circulatory System

	and energy. h. Describe radioactive decay and half-life.

E. The Living Environment

E1. Biodiversity

Students describe and analyze the evidence for relatedness among and within diverse populations of organisms and the importance of biodiversity.

- a. Explain how the variation in structure and behavior of a population of organisms may influence the likelihood that some members of the species will have adaptations that allow them to survive in a changing environment.
- b. Describe the role of DNA sequences in determining the degree of kinship among organisms and the identification of species.
- c. Analyze the relatedness among organisms using structural and molecular evidence.
- d. Analyze the effects of changes in biodiversity and predict possible consequences.

E2. Ecosystems

Students describe and analyze the interactions, cycles, and factors that affect short-term and long-term ecosystem stability and change.

- a. Explain why ecosystems can be reasonably stable over hundreds or thousands of years, even though populations may fluctuate.
- b. Describe dynamic equilibrium in ecosystems and factors that can, in the long run, lead to change in the normal pattern of cyclic fluctuations and apply that knowledge to actual situations.

E3. Cells

Students describe structure and function of cells at the intracellular and molecular level including differentiation to form systems, interactions between cells and their environment, and the impact of cellular processes and changes on individuals.

- a. Describe the similarities and differences in the basic functions of cell membranes and of the specialized parts within cells that allow them to transport materials, capture and release energy, build proteins, dispose of waste, communicate, and move.
- b. Describe the relationship among DNA, protein molecules, and amino acids in carrying out the work of cells and how this is similar among all organisms.
- c. Describe the interactions that lead to cell growth and division (mitosis) and allow new cells to carry the same information as the original cell (meiosis).
- d. Describe ways in which cells can malfunction and put an organism at risk.
- e. Describe the role of regulation and the processes that

Science: Human Anatomy
Unit 6: Circulatory System

	<p>maintain an internal environment amidst changes in the external environment.</p> <p>f. Describe the process of metabolism that allows a few key biomolecules to provide cells with necessary materials to perform their functions.</p> <p>g. Describe how cells differentiate to form specialized systems for carrying out life functions.</p> <p>E4.Hereditry and Reproduction Students examine the role of DNA in transferring traits from generation to generation, in differentiating cells, and in evolving new species.</p> <p>c. Explain how the instructions in DNA that lead to cell differentiation result in varied cell functions in the organism and DNA.</p> <p>d. Describe the possible causes and effects of gene mutations.</p>

<p>Related Maine Learning Results</p>	<p>E5.Evolution Students describe the interactions between and among species, populations, and environments that lead to natural selection and evolution.</p> <ol style="list-style-type: none"> a. Describe the premise of biological evolution, citing evidence from the fossil record and evidence based on the observation of similarities within the diversity of existing organisms. b. Describe the origins of life and how the concept of natural selection provides a mechanism for evolution that can be advantageous or disadvantageous to the next generation. c. Explain why some organisms may have characteristics that have no apparent survival or reproduction advantage. d. Relate structural and behavioral adaptations of an organism to its survival in the environment.
<p>Sample Lessons and Activities</p>	<ul style="list-style-type: none"> ▪ Draw and label a human heart ▪ Cow heart dissection ▪ Rat dissection ▪ Blood typing lab ▪ Observe blood cells under microscope ▪ Blood pressure lab
