Chemistry
Unit 1: Water: Exploring Solutions

Essential Understandings	▪ The physical world contains basic elements whose structure can be studied. ▪ Matter is transformed in accordance with various chemical laws and principles. ▪ Energy is a fundamental part of physical and chemical changes. ▪ Heat is one of the fundamental forms of energy affecting change and order or matter in our universe.
Essential Questions	▪ What techniques can we use to purify water? ▪ What are the physical and chemical properties of water? ▪ Why do some substances readily dissolve in water and other substances do not? ▪ How does chemistry contribute to effective water treatment?
Essential Knowledge	▪ Distillation, deionization, and reverse osmosis are water purification techniques. ▪ Municipal water purification and waste treatment are related to the water cycle. ▪ There are similarities and differences between solutions, suspensions, and colloidal mixtures.

Chemistry
Unit 1: Water: Exploring Solutions

Vocabulary	▪ Terms: ○ filtrate, percent recovery, histogram, range, average, mean, median, electrical conductivity, tyndall effect, direct water use, indirect water use, hydrologic cycle, gaseous state, liquid state, solid state, surface water, groundwater, aquifer, matter, physical properties, density, freezing point, aqueous solution, mixture, heterogeneous mixture, suspension, colloid, homogeneous mixture, solutions, solute, solvent, particulate level, atoms, element, compound, chemical formulas, substance, molecule, models, chemical symbols, periodic table of the elements, subscript, chemical equations, chemical reactions, reactants, products, diatomic molecules, atoms, protons, electrons, neutrons, ions, ionic compounds, anion, cation, polyatomic ion, confirming tests, precipitate, qualitative test, quantitative test, reference solution, control, data, saturated, solubility, solubility curve, unsaturated solution, supersaturated solution, polar molecule, solution concentration, percent, parts per million, parts per billion, heavy metal ions, green chemistry, lead ions, mercury ions, pH scale, alkaline, acids, bases, molecular substances, electronegativity, solvents, dissolved oxygen (DO), chlorination, trihalomethanes, hard water, ion exchange, detergents, water softener, osmosis, and reverse osmosis
Essential Skills	▪ Analyze data collected by each student on family water usage. ▪ Explore U.S regional differences in water sources and uses. ▪ Use real-life applications to discover the concept of density. ▪ Memorize and interpret symbols, formulas, and chemical equations. ▪ Recognize, name, and write formulas for ionic compounds. ▪ Interpret solubility curves to determine the amount of a substance dissolving at a given temperature. ▪ Calculate solution concentrations in percent by mass and ppm. ▪ Collect and present data in role at a special town council meeting to determine the cause of the fish kill in the town of Riverwood.

Chemistry
Unit 1: Water: Exploring Solutions

Related Maine Learning Results	Science and Technology A. Unifying Themes A1. Systems Students apply an understanding of systems to explain and analyze man-made and natural phenomena. a. Analyze a system using the principles of boundaries, subsystems, inputs, outputs, feedback, or the system's relation to other systems and design solutions to a system problem. b. Explain and provide examples that illustrate how it may not always be possible to predict the impact of changing some part of a man-made or natural system. A2.Models Students evaluate the effectiveness of a model by comparing its predications to actual observations from the physical setting, the living environment, and the technological world. A3.Constancy and Change Students identify and analyze examples of constancy and change that result from varying types and rates of change in physical, biological, and technical systems with and without counterbalances. B. The Skills and Traits of Scientific Inquiry and Technological Design B1.The Skills and Traits of Scientific Inquiry Students methodically plan, conduct, analyze data from, and communicate results of in-depth scientific investigations, including experiments guided by a testable hypothesis. a. Identify questions, concepts, and testable hypotheses that guide scientific investigations. b. Design and safely conduct methodical scientific investigations, including experiments with controls. c. Use statistics to summarize, describe, analyze, and interpret results. d. Formulate and revise scientific investigations using logic and evidence. e. Use a variety of tools and technologies to improve investigations and communications. f. Recognize and analyze alternative explanations and models using scientific criteria. g. Communicate and defend scientific ideas.

Related Maine Learning Results	C. The Scientific and Technological Enterprise C1. Understandings of Inquiry Students describe key aspects of scientific investigations: that they are guided by scientific principles and knowledge, and that they are performed to test ideas, and that they are communicated and defended publicly. a. Describe how hypotheses and past and present knowledge guide and influence scientific investigations. b. Describe how scientists defend their evidence and explanations using logical arguments and verifiable results.

Related Maine Learning Results	D. The Physical Setting D3.Matter and Energy Students describe the structure, behavior, and interactions of matter at the atomic level and the relationships between matter and energy. a. Describe the structure of atoms in terms of neutrons, protons, and electrons and the role of the atomic structure in determining chemical properties. b. Describe how the number and arrangement of atoms in a molecule determine a molecule's properties, including the types of bonds it makes with other molecules and its mass, and apply this to predictions about chemical reactions. c. Explain the essential roles of carbon and water in life processes. d. Describe how light is emitted and absorbed by atoms' changing energy levels, and how the results can be used to identify a substance. e. Describe factors that affect the rate of chemical reactions (including concentration, pressure, temperature, and the presence of molecules that encourage interaction with other molecules. f. Apply an understanding of the factors that affect the rate of chemical reaction to predictions about the rate of chemical reactions. g. Describe nuclear reactions, including fusion and fission, and the energy they release. h. Describe the radioactive decay and half-life. i. Explain the relationship between kinetic and potential energy and apply the knowledge to solve problems. j. Describe how in energy transformations the total amount of energy remains the same, but because of inefficiencies (heat, sound, and vibration) useful energy is often lost through radiation or conduction. k. Apply an understanding of energy transformations to solve problems. l. Describe the relationship among heat, temperature, and pressure in terms of the actions of atoms, molecules, and ions.

Related Maine Learning Results	E. The Living Environment E2.Ecosystems Students describe and analyze the interactions, cycles, and factors that affect short-term and long-term ecosystem stability and change. a. Explain why ecosystems can be reasonably stable over hundreds or thousands of years, even though populations may fluctuate. b. Describe dynamic equilibrium in ecosystems and factors that can, in the long run, lead to change in the normal pattern of cyclic fluctuations and apply that knowledge to actual situations. c. Explain the concept of carrying capacity and list factors that determine the amount of life that any environment can support. d. Describe the critical role of photosynthesis and how energy and the chemical elements that make up molecules are transformed in ecosystems and obey basic conversation laws.
Sample Lessons And Activities	▪ Make a diary of water us table for each student's home over a three day period and analyze the results. ▪ In a laboratory experiment purify a sample of "foul" water using a three step process. ▪ Using maps determine water usage in the United States by region and compare with other countries. ▪ Memorize and name common symbols, formulas, and equations. ▪ Perform a qualitative water testing experiment. ▪ Prepare and present data in role at a special town council meeting in the town of Riverwood. ▪ Compile and present fish kill data at a special town council meeting and reach a conclusion regarding the cause.
Sample Classroom Assessment Methods	▪ Sections A, B, C, and D quizzes followed by tests ager section ▪ Summary questions for each section ▪ Laboratory experiments for each section ▪ Skill problems for various parts of each section
Sample Resources	▪ Publications: o Chemistry in the Community – Chemcom, 5th edition, textbook and ancillaries ▪ Videos: o World Chemistry series o Planet Earth series
