

Science Chemistry

Unit 2: Materials: Structure and Uses

Essential Understandings	<ul style="list-style-type: none"> ▪ The physical world contains basic elements whose structure can be studied. ▪ Matter is transformed in accordance with various chemical laws and principles. ▪ Energy is a fundamental part of physical and chemical changes. ▪ Heat is one of the fundamental forms of energy affecting change and order of matter in our universe.
Essential Questions	<ul style="list-style-type: none"> ▪ How can chemists explain the chemical and physical properties of matter? ▪ Where do we find mineral resources and how are they processed? ▪ What information do chemical equations convey about matter and its changes? ▪ How can chemists modify matter to make it more useful?
Essential Knowledge	<ul style="list-style-type: none"> ▪ The periodic table contains patterns in the properties of elements. ▪ Materials have different uses based on their properties. ▪ The law of conservation of matter is used for tracking atoms and balancing chemical equations including oxidation-reduction. ▪ The sources, properties, and processing methods of materials can be changed and altered.
Vocabulary	<ul style="list-style-type: none"> ▪ <u>Terms:</u> <ul style="list-style-type: none"> ○ physical/chemical properties, physical/chemical changes, combustion, luster, ductile, metals, nonmetals, metalloids, conductor, nonconductor, malleable, brittle, periodic table, atomic number, nucleus, mass number, isotopes, periods, periodic relationship, groups/families, alkali metal family, noble gas family, halogen family, atmosphere, hydrosphere, lithosphere, ore, minerals, ductility, activity series, reduction, oxidation, oxidation-reduction (redox) reaction, electrometallurgy, pyrometallurgy, hydrometallurgy, electron-dot (Lewis dot) structure, oxidizing agent, law of conservation of matter, balanced chemical equation, coefficients, formula unit, mole, molar mass, conversion factor, percent composition, renewable and nonrenewable resources, allotropes, ceramics, plastics, alloy, superconductivity, semi-conductors, doping, coatings, electroplating, half-reaction, cathode, anode, and thin films.

Unit 2: Materials: Structure and Uses

<p>Essential Skills</p>	<ul style="list-style-type: none"> ▪ Classify each chemical statement as describing either a chemical/physical property or chemical/physical change. ▪ Produce graphs illustrating the periodic relationships of elemental properties. ▪ Use the periodic table to predict the properties of elements. ▪ Relate the activity series of metals to the periodic table and recognize a balanced chemical equation and balance if not. ▪ Link macroscopic properties to particulate structures. ▪ Determine the conversions using molar ratios derived from coefficients in a chemical equation. ▪ Calculate the percent composition of some metal ores. ▪ Analyze the life cycle of copper and then discuss with classmates. ▪ Design a new half-dollar and shares the design with the class.
<p>Related Maine Learning Results</p>	<p><u>Science and Technology</u></p> <p>A. Unifying Themes</p> <p>A1. Systems Students apply an understanding of systems to explain and analyze man-made and natural phenomena.</p> <ol style="list-style-type: none"> a. Analyze a system using the principles of boundaries, subsystems, inputs, outputs, feedback, or the system's relation to other systems and design solutions to a system problem. b. Explain and provide examples that illustrate how it may not always be possible to predict the impact of changing some part of a man-made or natural system. <p>A2.Models Students evaluate the effectiveness of a model by comparing its predications to actual observations from the physical setting, the living environment, and the technological world.</p> <p>A3.Constancy and Change Students identify and analyze examples of constancy and change that result from varying types and rates of change in physical, biological, and technical systems with and without counterbalances.</p>

Unit 2: Materials: Structure and Uses

<p>Related Maine Learning Results</p>	<p>B. The Skills and Traits of Scientific Inquiry and Technological Design B1.The Skills and Traits of Scientific Inquiry Students methodically plan, conduct, analyze data from, and communicate results of in-depth scientific investigations, including experiments guided by a testable hypothesis.</p> <ul style="list-style-type: none">a. Identify questions, concepts, and testable hypotheses that guide scientific investigations.b. Design and safely conduct methodical scientific investigations, including experiments with controls.c. Use statistics to summarize, describe, analyze, and interpret results.d. Formulate and revise scientific investigations using logic and evidence.e. Use a variety of tools and technologies to improve investigations and communications.f. Recognize and analyze alternative explanations and models using scientific criteria.g. Communicate and defend scientific ideas. <p>C. The Scientific and Technological Enterprise C1.Understandings of Inquiry Students describe key aspects of scientific investigations: that they are guided by scientific principles and knowledge, and that they are performed to test ideas, and that they are communicated and defended publicly.</p> <ul style="list-style-type: none">a. Describe how hypotheses and past and present knowledge guide and influence scientific investigations.b. Describe how scientists defend their evidence and explanations using logical arguments and verifiable results.

Unit 2: Materials: Structure and Uses

<p>Related Maine Learning Results</p>	<p>D. The Physical Setting D3.Matter and Energy</p> <p>Students describe the structure, behavior, and interactions of matter at the atomic level and the relationships between matter and energy.</p> <ol style="list-style-type: none">Describe the structure of atoms in terms of neutrons, protons, and electrons and the role of the atomic structure in determining chemical properties.Describe how the number and arrangement of atoms in a molecule determine a molecule's properties, including the types of bonds it makes with other molecules and its mass, and apply this to predictions about chemical reactions.Explain the essential roles of carbon and water in life processes.Describe how light is emitted and absorbed by atoms' changing energy levels, and how the results can be used to identify a substance.Describe factors that affect the rate of chemical reactions (including concentration, pressure, temperature, and the presence of molecules that encourage interaction with other molecules.Apply an understanding of the factors that affect the rate of chemical reaction to predictions about the rate of chemical reactions.Describe nuclear reactions, including fusion and fission, and the energy they release.Describe the radioactive decay and half-life.Explain the relationship between kinetic and potential energy and apply the knowledge to solve problems.Describe how in energy transformations the total amount of energy remains the same, but because of inefficiencies (heat, sound, and vibration) useful energy is often lost through radiation or conduction.Apply an understanding of energy transformations to solve problems.Describe the relationship among heat, temperature, and pressure in terms of the actions of atoms, molecules, and ions.

Unit 2: Materials: Structure and Uses

Related Maine Learning Results	<p>E. The Living Environment E2.Ecosystems Students describe and analyze the interactions, cycles, and factors that affect short-term and long-term ecosystem stability and change.</p> <ol style="list-style-type: none"> a. Explain why ecosystems can be reasonably stable over hundreds or thousands of years, even though populations may fluctuate. b. Describe dynamic equilibrium in ecosystems and factors that can, in the long run, lead to change in the normal pattern of cyclic fluctuations and apply that knowledge to actual situations. c. Explain the concept of carrying capacity and list factors that determine the amount of life that any environment can support. d. Describe the critical role of photosynthesis and how energy and the chemical elements that make up molecules are transformed in ecosystems and obey basic conservation laws.
Sample Lessons And Activities	<ul style="list-style-type: none"> ▪ Classify statements in writing as describing either a physical/chemical property or physical/chemical change. ▪ In a laboratory experiment explore several properties of seven elements to decide whether each element is a metal, nonmetal, or metalloid. ▪ Group 20 element data cards and then graph the data to determine the periodic variations in properties. ▪ Design a new fifty cent currency and present the coin to the class for judging.
Sample Classroom Assessment Methods	<ul style="list-style-type: none"> ▪ Sections A, B, C, and D Quizzes followed by tests after each section ▪ Summary Questions for each section ▪ Laboratory experiments for each section ▪ Skill problems for various parts of each section
Sample Resources	<ul style="list-style-type: none"> ▪ <u>Publications:</u> <ul style="list-style-type: none"> ○ <u>Chemistry in the Community</u>, Chemcom, 5th edition textbook and ancillaries ▪ <u>Videos:</u> <ul style="list-style-type: none"> ○ <u>World of Chemistry</u> series ○ <u>Planet Earth</u> series
