| Essential Knowledge | <ul style="list-style-type: none"> ▪ There are some common fraction-decimal-percent conversions which should be memorized. ▪ All Real numbers are either rational numbers or irrational numbers. ▪ Some examples of irrational numbers include pi and square roots of non-perfect squares. ▪ Square root values can be compared and ordered using estimation skills. ▪ Number lines are useful in comparing and ordering all Real numbers. ▪ A variety of Real numbers can be used in expressions and equations. ▪ A proportion is an equation made by two equal ratios and can be solved by finding scale factors or by using cross products. ▪ Proportions are used in a variety of applications including those with percents. ▪ Estimating with percents is a critical real-life skill. ▪ The important components of an exponential expression are the base and the exponent. ▪ A base ten value raised to a negative exponent is equivalent to one divided by the base ten value raised to the corresponding positive exponent. ▪ Converting between numbers in standard form and numbers in scientific notation requires an understanding of positive and negative exponents. |

| Essential Skills | <ul style="list-style-type: none"> ▪ Accurately compute with fractions, decimals, and integers. (A) ▪ Evaluate numerical expressions (including those with exponents) using positive rational numbers and integers by following the Order of Operations. (A) ▪ Apply the associative, commutative, and distributive properties to mental math arithmetic. (A) ▪ Set-up and solve two step word problems using all operations and involving all types of rational numbers (excluding negative decimals and fractions.) (R, A) ▪ Solve proportions by finding scale factors or by using cross products. (A) ▪ Identify proportional relationships in practical situations. (R) ▪ Set up and solve proportions in word problems including discount, tax, and tip problems. (A) ▪ Calculate and apply percentages of change. (R, A) ▪ Identify whether real numbers are rational or irrational. (I, R) ▪ Know some common examples of irrational numbers including pi or those arising from square roots. (I, R) ▪ Compare and estimate the size of square root values. (I, R) ▪ Estimate with rational and irrational numbers in decimal form. (I, R) ▪ Place a variety of real numbers on the number line including those written as fractions (with and without exponents), decimals, percents, and square roots. (I, R) ▪ Solve problems with proportional reasoning and squares/square roots, cubes/cube roots. (I) ▪ Convert between standard notation and exponential notation using powers of ten with positive (R, A) and negative exponents (I, R). ▪ Convert between standard and scientific notation. (R, A) ▪ Compare the size of numbers written in scientific notation form. (R, A) |
