

Mathematics
Precalculus: Academic
Unit 4: Oblique Triangle Trigonometry

Essential Understandings	<ul style="list-style-type: none"> ▪ Oblique trigonometry can be used to model real-life situations. ▪ Oblique trigonometry is one of the oldest branches of mathematics. ▪ Oblique trigonometry comes from right triangle trigonometry. ▪ Recent real-world applications involve both trigonometry and complex numbers.
Essential Questions	<ul style="list-style-type: none"> ▪ What is an oblique triangle? ▪ How can right triangle trigonometry be adapted to non-right triangle trigonometry? ▪ What is “solving” a triangle? ▪ What is the long and eventful history of oblique trigonometry? ▪ What are the components of a vector? ▪ How are complex numbers used in trigonometry?
Essential Knowledge	<ul style="list-style-type: none"> ▪ An oblique triangle has no right angles. ▪ To solve a triangle means to find its missing sides & angles, and sometimes its perimeter & area. ▪ Each vector has a horizontal and a vertical component. ▪ Two-dimensional applications can be solved using complex numbers and oblique trigonometry.
Vocabulary	<ul style="list-style-type: none"> ▪ <u>Terms:</u> <ul style="list-style-type: none"> ○ oblique triangle, laws of sines and cosines, Heron’s Formula, vector, magnitude, scalar, trig form of a complex number, DeMoivres Theorem, Roots of Unity
Essential Skills	<ul style="list-style-type: none"> ▪ Draw oblique triangles to some degree of accuracy. ▪ Use trigonometry to “solve” a triangle. ▪ Break down a 2-dimensional problem into its vertical & horizontal components.
Related Maine Learning Results	<p><u>Mathematics</u></p> <p>A. Number</p> <p>Real Number</p> <p>A1.Students will know how to represent and use real numbers.</p> <ol style="list-style-type: none"> a. Use the concept of nth root. b. Estimate the value(s) of roots and use technology to approximate them. c. Compute using laws of exponents. d. Multiply and divide numbers expressed in scientific notation. e. Understand that some quadratic equations do not have real solutions and that there exist other number systems to allow for solutions to these equations.

<p>Related Maine Learning Results</p>	<p>B. Data Measurement and Approximation B1.Students understand the relationship between precision and accuracy.</p> <ol style="list-style-type: none"> a. Express answers to a reasonable degree of precision in the context of a given problem. b. Represent an approximate measurement using appropriate numbers of significant figures. c. Know that most measurements are approximations and explain why it is useful to take the mean of repeated measurements. <p>. Geometry Geometric Figures C1.Students justify statements about polygons and solve problems.</p> <ol style="list-style-type: none"> a. Use the properties of triangles to prove theorems about figures and relationships among figures. b. Solve for missing dimensions based on congruence and similarity. c. Use the Pythagorean Theorem in situations where right triangles are created by adding segments to figures. d. Use the distance formula. <p>C2.Students justify statements about circles and solve problems.</p> <ol style="list-style-type: none"> a. Use the concepts of central and inscribed angles to solve problems and justify statements. b. Use relationships among arc length and circumference, and areas of circles and sectors to solve problems and justify statements. <p>C3.Students understand and use basic ideas of trigonometry.</p> <ol style="list-style-type: none"> a. Identify and find the value of trigonometric ratios for angles in right triangles. b. Use trigonometry to solve for missing lengths in right triangles. c. Use inverse trigonometric functions to find missing angles in right triangles. <p>Geometric Measurement C4.Students find the surface area and volume of three-dimensional objects.</p> <ol style="list-style-type: none"> a. Find the volume and surface area of three-dimensional figures including cones and spheres. b. Determine the effect of changes in linear dimensions on the volume and surface areas of similar and other three-dimensional figures.

<p>Related Maine Learning Results</p>	<p>D. Algebra</p> <p>Symbols and Expressions</p> <p>D1.Students understand and use polynomials and expressions with rational exponents.</p> <ol style="list-style-type: none"> a. Simplify expressions including those with rational numbers. b. Add, subtract, and multiply polynomials. c. Factor the common term out of polynomial expressions. d. Divide polynomials by $(ax+b)$. <p>Equations and Inequalities</p> <p>D2.Students solve families of equations and inequalities.</p> <ol style="list-style-type: none"> a. Solve systems of linear equations and inequalities in two unknowns and interpret their graphs. b. Solve quadratic equations graphically, by factoring in cases where factoring is efficient, and by applying the quadratic formula. c. Solve simple rational equations. d. Solve absolute value equations and inequalities and interpret the results. e. Apply the understanding that the solution(s) to equations of the form $f(x) = g(x)$ are x-value(s) of the point(s) of intersection of the graphs of $f(x)$ and $g(x)$ and common outputs in table of values. f. Explain why the coordinates of the point of intersection of the lines represented by a system of equations is its solution and apply this understanding to solving problems. <p>D3.Students understand and apply ideas of logarithms.</p> <ol style="list-style-type: none"> a. Use and interpret logarithmic scales. b. Solve equations in the form of $x + b^y$ using the equivalent form $y = \log_b x$. <p>Functions and Relations</p> <p>D4.Students understand and interpret the characteristics of functions using graphs, tables, and algebraic techniques.</p> <ol style="list-style-type: none"> a. Recognize the graphs and sketch graphs of the basic functions. b. Apply functions from these families to problem situations. c. Use concepts such as domain, range, zeros, intercepts, and maximum and minimum values. d. Use the concepts of average rate of change (table of values) and increasing and decreasing over intervals, and use these characteristics to compare functions.
