# Mathematics Precalculus: Honors Unit 8: Conics

Essential Understandings	<ul> <li>Conics are models of real-life situations.</li> <li>Conics have many reflective properties that are used in every day situations</li> <li>Conics work can be simplified with graphing calculators.</li> </ul>
Essential Questions	<ul> <li>What are the conics and how are they related to a cone?</li> <li>How can the reflective properties of conics be used in every day situations?</li> <li>What are the types of real-life situations where conics can be used as models and prediction tools?</li> <li>How does the vocabulary of conics apply to the real-life situations they model?</li> <li>What are the degenerate conics?</li> <li>How is a graphing calculator used to work with conics?</li> <li>How can we rotate conic selections?</li> <li>How can we graph conic sections using polar equations?</li> </ul>
Essential Knowledge	<ul> <li>Parabolas describe the flight path (due to gravity) of an object.</li> <li>Parabolas describe relationships between two sets of data where the second difference between terms remains constant.</li> <li>Parabolas describe real-life situations involving area.</li> <li>Hyperbolas describe certain types of radar imaging situations.</li> <li>Parabolas, circles, ellipses and hyperbolas describe the orbital paths of all celestial bodies when in motion.</li> <li>Parabolas, circles, ellipses and hyperbolas provide cross-sectional models for some 3-dimensioanl objects.</li> <li>Parabolas, circles, ellipses and hyperbolas each have their own unique reflective property.</li> <li>Conic sections can be rotated by eliminating terms.</li> <li>Conic sections can be graphed using polar equations.</li> </ul>
Vocabulary	■ Terms:  o conic, conic sections, parabola, circle, ellipse, hyperbola, degenerate conics, directrix, focus, foci, tangent to a curve, vertex, major & minor axes, center, eccentricity, transverse & conjugate axes, asymptotes, focal chords, latus rectum, apogee & perigee, rotation invariants, polar coordinates, polar coordinate system
Essential Skills	<ul> <li>Evaluate and graph all types of conics.</li> <li>Write &amp; work with the equations for the four conics.</li> <li>Decide which type of conic to use in a given real-life situation.</li> <li>Decide which type of conic to use with particular reflective properties.</li> <li>Use a graphing calculator appropriately to work with the various types of conics.</li> <li>Solve systems of conics</li> </ul>

# Mathematics Precalculus: Honors Unit 8: Conics

### Mathematics

#### A. Number

#### Real Number

- A1. Students will know how to represent and use real numbers.
  - a. Use the concept of nth root.
  - b. Estimate the value(s) of roots and use technology to approximate them.
  - c. Compute using laws of exponents.
  - d. Multiply and divide numbers expressed in scientific notation.
  - e. Understand that some quadratic equations do not have real solutions and that there exist other number systems to allow for solutions to these equations.

#### B. Data

### Measurement and Approximation

- B1.Students understand the relationship between precision and accuracy.
  - a. Express answers to a reasonable degree of precision in the context of a given problem.
  - b. Represent an approximate measurement using appropriate numbers of significant figures.
  - c. Know that most measurements are approximations and explain why it is useful to take the mean of repeated measurements.

## Related Maine Learning Results

#### C. Geometry

#### Geometric Figures

- C1. Students justify statements about polygons and solve problems.
  - a. Use the properties of triangles to prove theorems about figures and relationships among figures.
  - b. Solve for missing dimensions based on congruence and similarity.
  - c. Use the Pythagorean Theorem in situations where right triangles are created by adding segments to figures.
  - d. Use the distance formula.
- C2. Students justify statements about circles and solve problems.
  - a. Use the concepts of central and inscribed angles to solve problems and justify statements.
  - b. Use relationships among arc length and circumference, and areas of circles and sectors to solve problems and justify statements.
- C3. Students understand and use basic ideas of trigonometry.
  - a. Identify and find the value of trigonometric ratios for angles in right triangles.
  - b. Use trigonometry to solve for missing lengths in right triangles.

# Mathematics Precalculus: Honors Unit 8: Conics

c. Use inverse trigonometric functions to find missing angles in
right triangles.

- C4. Students find the surface area and volume of three-dimensional objects.
  - a. Find the volume and surface area of three-dimensional figures including cones and spheres.
  - b. Determine the effect of changes in linear dimensions on the volume and surface areas of similar and other three-dimensional figures.

#### D. Algebra

Symbols and Expressions

- D1.Students understand and use polynomials and expressions with rational exponents.
  - a. Simplify expressions including those with rational numbers.
  - b. Add, subtract, and multiply polynomials.
  - c. Factor the common term out of polynomial expressions.
  - d. Divide polynomials by (ax+b).

### Equations and Inequalities

D2. Students solve families of equations and inequalities.

- a. Solve systems of linear equations and inequalities in two unknowns and interpret their graphs.
- b. Solve quadratic equations graphically, by factoring in cases where factoring is efficient, and by applying the quadratic formula.
- c. Solve simple rational equations.
- d. Solve absolute value equations and inequalities and interpret the results.
- e. Apply the understanding that the solution(s) to equations of the form f(x) = g(x) are x-value(s) of the point(s) of intersection of the graphs of f(x) and g(x) and common outputs in table of values.
- f. Explain why the coordinates of the point of intersection of the lines represented by a system of equations is its solution and apply this understanding to solving problems.

D3. Students understand and apply ideas of logarithms.

- a. Use and interpret logarithmic scales.
- b. Solve equations in the form of  $x + b^y$  using the equivalent form  $y = \log_b x$ .
